

Course Materials: Pages

Create a custom page to add text, images, videos, HTML, or any combination of these elements to present information to your students. Each page has a Rich Text Editor that enables you to customize font styles, colors, indentations, and other options. You can also upload files, embed videos, and customize the HTML of the page.

Script embed codes are not supported in Schoology

Creating Pages

1. From the course Materials page, click **Add Materials**.
2. Select **Add Page**.
3. Construct the page content.
 - Use the editor to write custom content.
 - Use the **Insert** buttons to embed images, videos, or equations into the editor.
 - You can toggle between Visual and HTML versions of the Page editor.
 - You can attach a file, link, resource, audio/video recording (Enterprise only), and/or external tool to the bottom of the page.
 - Click Align Learning Objectives if you want to align the page with standards or custom learning objectives.
 - Click Individually Assign (Enterprise only) to assign the page to one or more students.
4. Click **Create** to complete.

You can also create pages within course folders, or add them to folders after you create them.

Display Content Inline

By default, students must click into a page to access its content. However, you can choose to display a page inline, so that its contents are expanded and accessible from the **Materials** page or from the folder level, without having to click on the page.

To display the content directly within the folder, click the **ABC** icon in Options as you create or edit the page. When you disable the feature, the clue tip reads Display on new page. When you enable the feature to display content directly within the folder, the clue tip reads Display inline.
